

Note from Aerin

- For the flight on May 9 2026, the time and date were unchanged in the particle data. The date in the data is Feb 8 2026, however the real date is May 9.
- The time started at 13:58, which according to Brother Lines, he turned on the device close to 10 am. The balloon launched at 10:20, which in particle data, the time would then be 14:20
- We know that the balloon popped at 11:50am, , which then translates to the particle time being 15:15, and all other data is cut out from the code to make sure particles are not double counted.
